PUBLIC COMMENT-**ADJOURNMENT-**

GRACE 2026-2027 Round Approved

The Greene County's Reinvestment in Agriculture: Cost-share Enhancement (GRACE) Program is a conservation-based program directly funded by the Greene County Conservation District (GCCD) that was designed to enhance soil health and water quality within the agriculture community. The GCCD Board of Directors approved \$256,049.89 in contracts for the 2026-2027 program year at their September 15, 2026 Board meeting.

The 55 contracts approved at the September Board meeting include 1258 tons of lime for 681 acres, 581 acres of fertilizer, 9,550 feet of interior pasture division or streambank fencing, 21 watering systems and 21 forestry projects. These Best Management Practices promote soil and water conservation practices that will improve soil health in pastures and woodlands. These practices can lead to improved animal production as well as, healthier soils and forest stands. When these practices are implemented correctly, value and profit can be added to the land.

The district has had great success and participation within the GRACE Program. This would not be possible without the financial assistance received by PA Act 13 Unconventional Gas Impact Fee that are allocated through the Public Utility Commission and State Conservation. The district would like to recognize Greene County Government and their support of our organization that cover many of the district's overhead costs and administrative assistance. The support of county government allows the district to utilize "Impact Fee Funds" on the ground within the community that has been impacted by gas development over the past years. The money and support received from all of these funding sources could be utilized to cover other District expenses; however, support from county government frees up funds allocated to the district allowing the ability to spend money on projects that are put back into Greene County. Through this cost share assistance for landowners the implementation of BMPs within their agricultural operations will enhance soil health, water quality and create more productive farms within the County.
